

02 / COLLECTION GUIDE

# KENCLAMAT

Matte Paint Protection Film

## Choose how your paint takes the light.

START WITH THE SURFACE

An introduction to the collection and the questions that help define a suitable installation.

AI visual concept. Actual film appearance and approved product information require a physical sample and current documents.

02 / PURPOSE & APPEARANCE

# What this collection is for.

KENCLAMAT is the matte paint protection film family. Compare a sample if you are matching an existing matte finish or exploring a matte look on gloss paint. Your installer can confirm which film and coverage suit the vehicle.

Illustrative AI visual. It does not show a measured KENCLA installation.

SURFACE

Exterior painted body panels

APPEARANCE

Matte finish assessed against the vehicle’s existing paint

03 / THE DETAILS

# Look closer at the finish.

The right comparison happens on the surface, in the light and at the edges that matter to you.

01

## Match an existing matte finish

Bring the vehicle or a paint sample. View the film and the original finish together under diffuse and direct light. Confirm with the installer whether the selected film is suitable for that paint system.

02

## Explore a matte finish on gloss paint

Place a sample next to the untreated paint and view it from the front and the side. Decide which areas should share the same finish before an installer prices the job.

03

## Review the transition between panels

Look along door gaps, wheel arches and any adjacent panel that will stay untreated. Ask which boundaries will be visible and review the approved care guide before handover.

04 / COVERAGE

# Plan the area you want to address.

Use these as conversation starters. An installer must define the exact film, edges and eligible surface.

01

## Existing matte paint

Check the factory or refinished paint specification, then ask the installer to assess appearance and suitability with the selected film.

02

## Full-body matte finish

Review an itemized plan for the visible painted body panels. Discuss jambs, recesses and areas where the original finish may remain visible.

03

## Selected matte panels

Compare film against adjoining uncovered panels in daylight and shade. Confirm how the finish transition will read from common viewing angles.

05 / BEFORE INSTALLATION

# A clear next step.

Bring the vehicle details, compare an applicable physical sample and request the current approved documents for the exact film.

## Will the film match factory matte paint?

Matte finishes vary across paint systems. Compare a physical sample against the vehicle and ask the installer to confirm film suitability for that surface.

## Can I use it to change a gloss finish?

Ask the installer to identify a model approved for your paint and show a sample beside the untreated finish. Review how much of the vehicle you want to cover.

## How should I care for the matte finish?

Ask for the model's care guide before the installation and check which wash products and methods it specifies. Confirm any initial care instructions with the installer.

**PRODUCT INFORMATION STATUS**

This guide is an overview. Measured KENCLA model specifications, saleable options and warranty terms are not established by this document. Ask for the current approved data for the exact film.
