

04 / COLLECTION GUIDE

WINDSHIELD

Front Windshield Protection Film

Protection for the glass you look through.

START WITH THE SURFACE

An introduction to the collection and the questions that help define a suitable installation.

AI visual concept. Actual film appearance and approved product information require a physical sample and current documents.

02 / PURPOSE & APPEARANCE

What this collection is for.

WINDSHIELD is protective film for the front windshield. Start with the specific vehicle and glazing so the installer can review fit, visibility and the condition of the glass before you choose an installation.

Illustrative AI visual. It does not show a measured KENCLA installation.

SURFACE

Front windshield

APPEARANCE

Driver-view appearance to be checked on the installed glass

03 / THE DETAILS

Look closer at the finish.

The right comparison happens on the surface, in the light and at the edges that matter to you.

01

Confirm your exact windshield

Share the vehicle year, make and model. Mention replaced glass, visible damage, cameras, sensors, heating or a head-up display where relevant. Ask which configuration the film supports.

02

Review the driver’s view

Ask to inspect a representative installation from the driver’s seat and from outside. The approved film-and-glass data sheet is the reference for measured optical performance.

03

Plan care and inspection

Before handover, review the model-specific cleaning instructions and any inspection or wiper guidance. Ask the installer how to follow up if the film needs attention.

04 / COVERAGE

Plan the area you want to address.

Use these as conversation starters. An installer must define the exact film, edges and eligible surface.

01

Front windshield assessment

Bring the exact vehicle and glazing details so the installer can check the approved fit and define the installation boundaries.

02

Glass with vehicle equipment

Identify cameras, sensors, antennas, heating or head-up display equipment as applicable. Ask the installer to verify requirements for the configuration.

03

Repaired or replaced glass

Tell the installer about repairs, chips and replacement glass. Have them inspect the surface and confirm the appropriate next step.

05 / BEFORE INSTALLATION

A clear next step.

Bring the vehicle details, compare an applicable physical sample and request the current approved documents for the exact film.

What should I tell the installer?

Share the year, make and model, plus previous glass work and any cameras, sensors, heating or head-up display equipment. Ask for a fit check against the actual glass.

How can I assess visibility?

Look at an applicable installation from the driver's position. Ask for the approved data for the film and glazing combination, including the stated test conditions.

How do I care for the windshield after installation?

Follow the instructions for the installed model. Ask the installer about cleaning, wiper care and how to report any change that affects the view.

PRODUCT INFORMATION STATUS

This guide is an overview. Measured KENCLA model specifications, saleable options and warranty terms are not established by this document. Ask for the current approved data for the exact film.
